Happy Holidays from FltPlan.com

As another year ends, we at FltPlan.com would like to thank all of our loyal users. We're proud to say we have over 90,000 active users now. We wish you all another safe and happy year.

We'd also like to thank all of our advertisers. They have great products and services, and they help to keep FltPlan.com a free site. We hope you'll support them in the New Year!

It's been an exciting year at FltPlan.com, as we continue to grow. We've added more great people to our staff, and we've added new services and features.

For instance, to meet new governmental regulations:

- FltPlan.com was the first to offer certified eAPIS manifest submission for the new Customs and Border Patrol requirements (see **http://www.fltplan.com/eAPISinfo.htm**).
- FltPlan.com was the first to provide an FAA approved method of checking GPS RAIM prediction integrated with your flight plans, to meet the new FAA requirements for flights predicated on GPS (see **http://www.fltplan.com/GPSRAIMpredictioninfo.htm**).

Some other improvements we made this year include the following:

- You can now create and file flight plans to/from Bermuda, the Virgin Islands, Alaska, Hawaii and Puerto Rico using FltPlan.com.
- You can now create and file VFR flight plans on FltPlan.com, using all the ease and reliability you've come to count on for IFR flight plans.
- We added features for your smartphones, such as Approach charts and the Airport/Facility Directory.
- You can now upload your FltPlan.com flight plan data to your Honeywell AFIS, Rockwell Collins RIU-4000, Teledyne Controls Telelink, and Universal Avionics Unilink systems, using Satcom Direct datalink.
- You can also now upload FltPlan.com flight plan data to your Garmin 1000 system or Garmin 430W/530W system.
- You're able to retrieve flight plan information for flights filed on FltPlan.com from as far back as 2005. (This feature can be found on our Flight Tracking page.)
- When copying aircraft performance from a donor, you now have the option to include the ICAO Format equipment data. This is perfect for

transferring a 'customized' aircraft to a new member of a flight department, or to transfer your customized performance and ICAO Format data to a buddy that flies the same make and model of aircraft.

For a full list of added features in 2009 (and also for previous years) please see: **http://www.fltplan.com/NewChanges.htm**

We plan to offer you even more new features in the coming year, while maintaining our commitment to reliable flight planning and great customer service.

Happy New Year and Happy Flying!

FltPlan.com's eAPIS Service Now Includes Part 135 Manifests and MCLs

FltPlan.com, already the largest certified provider of Part 91 eAPIS manifest submissions to CBP, is now submitting Part 135 manifests and MCLs (Master Crew List).

FltPlan.com's eAPIS systems are secure, full-feature programs, integrated with your flight plans; and they are approved by CBP and DHS.

Passenger, Aircraft, Aircraft Owner, and Crew information can be saved for future retrieval making it possible to create an eAPIS Manifest in less than one minute. Easily display and print (in PDF format) your completed General Declaration and Customs Form 178.

For more information please call 1-888-358-3375 or 1-731-855-8000.
